...misable test certificates in PDF or HTML
...L database structure
...Multilingual program

Rigel Med-eBase Version 2.0, is our latest software application dedicated to medical safety and functional testing.

Rigel Med-eBase Version 2.0 software incorporates a number of special features not previously associated with the recording and management of electrical and functional safety testing data.

This new program facilitates the production of a comprehensive series of advanced results and data reports including comparison alert function. A unique option to store your data on a local or remote database structure and an exceptional layout makes the system easy to use, with very little training required.

The Med-eBase Software Version 2.0 can use both local and remote databases. A local database requires no database server to be installed while a remote database allows multiple user to access the same data simultaneously.

Med-eBase V2.0 software allows the user to easily manage the test data to and from the Rigel Medical test equipment range (R288, BP-Sim, SP-Sim, Uni-Sim).

Sort functions, comparison of test results combined with a database functions will allow the user to schedule up and coming safety tests which can than be uploaded to the Rigel Medical products for fast re-testing of stored assets.

Med-eBase V2.0 stores all traceable data coming from our Rigel Medical testers in an SQL database including: manufacturer name, model, serial number, asset description, site and location, service code, user name, test data, and comments.

This provides a complete record system of electrical safety and functional test data directly from Rigel Medical products without the need to duplicate or replicate data entry.

The network version allows users to store test results centrally and give users access to one database which holds the data in safe and secure on a remote location.
Rigel Medical's new Med-eBase V2.0 program will provide peace of mind when it comes to managing your test data and record keeping and can be extended to fit your needs when your company is growing.

Key features

- **Single and Network License**
  Allowing the user to store the database on a single computer or on a easily accessible and safe central network location to be accessible where and when required.

- **SQL Database Structure**
  User and network administrators can now choose between three different SQL databases, SQLite, MySQL and MS SQL(ODBC), this for a more flexible and secure storage of the database.

- **Custom Test Certificates**
  Test certificates can now be customised to allow for more flexibility in design and layout, and can be stored as PDF or HTML files

- **Comparison Alerts**
  Comparison alerts can be set during the download which provides the user with a quick overview of the downloaded assets and which assets require attention due to increase in leakage or change in expected values.

- **Tester Configuration**
  The asset database includes the creation of new assets and setting up an equipment library, which can then be uploaded into the Rigel tester range.

- **Asset Library Functions**
  This will lead to easy, fast and efficient configuration of test devices, allowing easier retesting of assets in the field.
Asset Management Software

Database Management & Scheduling

Med-eBase properly manages your database, allowing efficient work order scheduling and test device configuration. Retesting is also much easier.

Comparison Alerts

Comparison alerts can be set during the download which provides the user with a quick overview of the downloaded assets and which assets require attention due to increase in leakage or change in expected values.

Customised Test Certificates

Test certificates can now be customised to allow for more flexibility in design and layout, and can be stored as PDF or HTML files.

Key features

- **Third Party Communication**
  This allows for easy and straightforward access from third party software to our Med-eBase V2, extending our software's usability even further.

- **Compatible with Rigel Safety Simulator Range and Functional Testers**
  Med-eBase V2 is now fully compatible with our Rigel safety tester and simulator range offering users a tool to store test results in a secure and convenient SQL database.

TECHNICAL SPECIFICATION

Product Includes:
- Med-eBase installer disced-eBase installer disc
- Microsoft SQL Server 2008 - Express Edition
- Instruction manual

System Capabilities:
System requirements for Med-eBase are as follows:
- IBM Compatible PC
- Processor Speed 1GHz or higher
- Microsoft Windows XP, Windows Vista & Windows 7
- 32 & 64-bit Operating Systems
- 512MB RAM
- 150MB available hard disk space
- Colour monitor with 32 bit colour or greater video card
- CD ROM drive

Supported databases:
- Microsoft SQL Server 2005/2008
- My SQL 5.1

Part number: 383A910
