Installing Gadget serial for use with Multi-Flo Remote Control on Med-eBase

To use the remote control mode the user will need to install the Gadget Serial V2.4 Driver. The Gadget serial driver folder should have come on the utility disc with the Multi-Flo. The user will need to save the gadget serial folder either on their desktop or in an easy to locate destination of their choosing. To install the gadget serial driver the Multi-Flo need to be turned on and connected to the PC using the USB serial cable.

Equipment required:

- Multi-Flo
- PC running Med-eBase V2.4.0
- Gadget serial driver install files (on utility disc or Rigel website)
- USB Serial cable or memory stick
- 1) On the Multi-Flo menu scroll down and select remote control mode. The Multi-Flo will then try to connect with the PC.
- 2) The PC will attempt to download the install drivers for the gadget serial. As the driver is located on the PC and cannot be found on the internet this step is not required. Click on the icon when it appears as seen below.

3) Select "skip obtaining driver software" which is blue and underlined to stop widows looking for driver as the Rigel device won't be able to connect to the PC while the computer is performing this task. Select yes on the driver software installation screen to skip the driver update.

4) Once this is complete open the Control Panel and go to 'Devices and Printers'. The gadget serial will be an unspecified device. Right click on the gadget serial v2.4 and select properties.
